

WE'RE HIRING

Implementation Engineer – Technical Support Intern

Technical Implementation & Support Team · Prodoc · Internship

INTERNSHIP DETAILS

Role	Implementation Engineer – Technical Support Intern
Department	Technical Implementation & Support
Internship Duration	4 Months
Work Mode	On-site
Working Days	5 Days a Week – Work From Office (WFO)
Stipend	₹18,000 – ₹25,000 per month
PPO	Pre-Placement Offer opportunity based on internship performance and business requirements.

01 | ABOUT THE ROLE

We are looking for an enthusiastic Implementation Engineer – Technical Support Intern to join our Technical Implementation & Support Team.

The intern will work closely with our implementation and engineering teams to support the technical onboarding and integration of our CRM platform with IVR/telephony solutions, Hospital Information Systems (HIS), and other third-party applications.

This is a hands-on technical internship suited for candidates who enjoy working with APIs, integrations, debugging, scripting, data handling, and solving technical problems.

02 | KEY RESPONSIBILITIES

- Assist in the technical onboarding and implementation of customers.
- Support CRM integrations with IVR and telephony/dialer platforms, Hospital Information Systems (HIS), third-party REST APIs and business applications, and webhooks and real-time communication systems.
- Understand customer requirements and assist in translating them into technical configurations.
- Assist in configuring and testing REST APIs, webhooks, call flows, CRM workflows, data synchronization, and authentication/authorization.
- Assist with customer data migration and bulk data imports.
- Validate imported data and troubleshoot data-related issues.
- Develop basic scripts and utilities for data processing, transformation, and validation.
- Test APIs and integrations using Postman and browser developer tools.
- Troubleshoot API failures, authentication issues, integration problems, and workflow failures.
- Work with implementation, product, and engineering teams to investigate and resolve technical issues.
- Participate in end-to-end integration testing before customer go-live.
- Assist in preparing technical documentation, implementation notes, and integration guides.
- Monitor integrations after go-live and assist with technical support.
- Analyze logs and assist in identifying the root cause of production issues.
- Reproduce customer-specific issues and coordinate with engineering teams for resolution.

03 | REQUIRED SKILLS

We are looking for candidates with a strong interest in software implementation and technical problem-solving.

- Basic knowledge of REST APIs and HTTP methods.

- JavaScript.
- Python scripting.
- Shell scripting.
- HTML and CSS.
- JSON and Webhooks.
- API authentication – API Keys, OAuth, Tokens, etc.
- Request/response debugging.
- Postman or similar API testing tools.
- Browser Developer Tools.
- Basic understanding of WebSockets and real-time communication.
- Strong analytical and troubleshooting skills.
- Ability to understand technical documentation and API documentation.
- Willingness to learn new technologies and third-party platforms.
- Good communication skills and ability to work with technical and non-technical teams.

04 | PREFERRED SKILLS

- MongoDB, MySQL, or PostgreSQL.
- Datadog or other cloud monitoring tools.
- Asynchronous programming and event-driven systems.
- API integration projects.
- Git/GitHub.
- AI coding assistants such as GitHub Copilot, Claude Code, or similar tools.

Candidates who have used AI coding tools are expected to understand how to review, test, validate, and improve AI-generated code rather than relying on it blindly.

05 | WHAT YOU'LL LEARN

- Real-world API integrations.
- CRM implementation and configuration.
- IVR and telephony integrations.
- HIS and third-party system integrations.
- Data migration and data validation.
- Webhooks and real-time communication.
- API testing using Postman.
- Debugging and log analysis.
- Customer implementation lifecycle.
- Technical troubleshooting and support.
- Working with engineering and product teams.
- Using AI-assisted development tools for technical problem-solving.

06 | TYPICAL IMPLEMENTATION FLOW

Customer Requirement → Technical Analysis → API/Integration Setup → Data Import → Workflow Configuration → Testing → UAT → Go-Live → Post-Go-Live Support

As an intern, you will progressively participate in different stages of this implementation lifecycle under the guidance of the implementation and engineering teams.

07 | ELIGIBILITY

- BCA – Pursuing or Completed.
- B.Tech / B.E. – Pursuing or Completed.

- Candidates with a strong interest in software implementation, APIs, integrations, technical support, and troubleshooting are encouraged to apply.
- Freshers and candidates with relevant academic/project experience are welcome.

08 | WHO SHOULD APPLY?

- Enjoys solving technical problems.
- Is curious about how APIs and software systems communicate.
- Likes debugging and finding the root cause of issues.
- Has built academic or personal projects involving APIs, JavaScript, Python, databases, or web technologies.
- Is comfortable learning new technologies quickly.
- Wants to build a career in Implementation Engineering, Integration Engineering, Technical Support, or Software Engineering.
- Is willing to work on-site, 5 days a week.

If you enjoy breaking down technical problems, experimenting with APIs, debugging issues, and learning how different software systems work together — we'd love to hear from you!
